INNOVATION Lean & Green 101

OVERVIEW

Environmental waste impacts competitiveness, the bottom line, relationships with customers, facilities and operations. With Lean & Green, you can eliminate environmental waste to protect margins while increasing profitability, competitiveness and ensuring long-term sustainability.

This workshop will provide a practical overview, real-world success stories and the hands-on tools needed to apply LEAN thinking to include overlooked environmental waste, including the seven key environmental wastes that represent potential for significant savings. Take LEAN to the next level, with this LEAN and Green 101 workshop.

input, we can create the conditions you need to grow, invest in your future, and become even more successful in domestic and global markets.

WHY LEAN & GREEN 101?

Upon completion of this workshop, participants will:

- Understand how green (environmental) wastes impact nearly every aspect of manufacturing operations;
- See how a focus on reducing green waste will enable organizations to not only survive but thrive under the recently announced provincial and federal prices on carbon;
- Identify the seven key wastes associated with green thinking;
- Be able to implement proven and dynamic process for green waste elimination that build on existing continuous improvement processes and Lean thinking;
- Integrate Lean & Green process with existing processes and programs;
- Apply Lean tools to environmental savings, green value stream mapping.

ABOUT THE INSTRUCTOR:

DARRYL MINTY, SK VICE PRESIDENT, CME LEAN MASTER BLACK BELT

Darryl Minty is a leading authority on lean and continuous improvement and widely respected within the manufacturing community across Canada. Darryl brings with him nearly 30 years of Continuous Improvement experience. Darryl is known for applying traditional lean methodologies to specific areas such as Environmental and Health & Safety.
