

LOCATIONS & DATES

Brandon - October 21st, 2020

Winkler - October 22nd, 2020

Winnipeg - October 27th & 29th, 2020

CONNECTION

Manufacturing Recovery Round Tables

OVERVIEW

CME engages and connects with leaders in the manufacturing community across Manitoba in order to identify pressing trends. In addition, CME ensures its programs and services are tailored to the current and future needs of the manufacturing industry throughout the province. This year, as we face the unprecedented challenge of a world impacted by COVID-19, CME is replacing larger summits and conferences with a series of smaller industry-round tables. This will ensure that decision-makers have the ability to hear and learn from best practices while also being engaged in the strategies and decisions that are needed in their organizations and in government programs and policies as we look to 2021.

WHO CAN BENEFIT

CEOs, presidents and senior executives leading manufacturing firms of all sizes.

BACKGROUND

In 2015, CME led a national dialogue – Industrie 2030 – on the future of manufacturing in Canada and how we can support a doubling of the sector by 2030. In Manitoba, CME hosted a number of successful sessions, which informed more than five years of policy recommendations to government. While disastrous for the economy, the COVID-19 pandemic served as an important disruptor and created broad awareness among government leaders of the critical role the sector plays in Canada, while also emphasizing the importance of strong domestic supply chains. There is no better time than now to refocus our efforts on closing the productivity gap and strengthening manufacturing as the backbone of the Manitoba economy!

FORMAT

The format will include a round table discussion on what is standing in the way, and what is required to move forward on key manufacturing topics and issues, including:

- Addressing manufacturing skills and labour needs
- Expanding manufacturing capacity
- Designing, developing and manufacturing more products and technologies at home in Canada
- Accelerating the adoption of new technologies and processes
- Selling more, at home and abroad
- Ensuring the business environment is positive and supportive of growth

COST

Free (exclusive to CEOs, presidents and senior executives leading manufacturing firms of all sizes).
