Manufacturers' Operations Councils (MOCs)

A Manufacturers' Operations Council (MOC) is an exclusive group of senior operations professionals from non-competing CME member companies. MOCs provide a forum for the confidential exchange of information on a wide range of current operational issues. Meetings are highly interactive and participants are expected to share their experiences on various topics to help the group resolve their operations challenges. Members also access CME resources and trusted third-party subject matter experts.

COUNCIL PARTICIPANTS

Common participants in a MOC include VPs of Manufacturing, Director of Operations, Managers of Operations, Plant Managers, Production Supervisors and Manufacturing Leaders.

FOCUS

Resolving operations and productivity issues faced by small- and medium-sized manufacturers.

HOW IT WORKS

- Participants are matched with peer executives of other leading non-competing companies;
- Benefit from peer support and learning, as well as from CME resources;
- The council is coordinated and guided by trained facilitator who has C-suite or senior level executive experience;
- Each month, a morning meeting is held at one of the participants' facilities;
- Discussions are confidential
