

NEW MEMBERS WELCOME

Advanced Manufacturing Cluster NL (AMC NL)

Advanced Manufacturing can move a company forward and provide forward-thinking solutions to day-to-day challenges, resulting in leaner and safer workflows, and increased profitability. But how do you harness this technology and effectively implement it into your organization’s current processes? We can help.

- Are you a manufacturing company representative based or active in Newfoundland and Labrador (NL)?
- Are you interested in collaborating, sharing, and learning more about how Advanced Manufacturing (AM) can help your company become more productive and competitive?
- Would you like to learn more about how to harness the potential of AM?

If you answered yes to any of these questions, we invite you to join Newfoundland and Labrador’s Advanced Manufacturing Cluster (AMC NL).

We meet monthly to share ideas, network, and learn about important AM hot-topic issues, best practices, funding opportunities, and events (local, national, and global). The AMC-NL also hosts events, including workshops, facility tours, guest speakers, and more.

AMC-NL GOALS

Our goal is to increase productivity and competitiveness of NL companies by helping them to better understand, implement, and use AM. By promoting and supporting collaboration between companies—in NL and beyond—the AMC NL provides access to supports, programs, mentoring, and funding opportunities.

WHO CAN JOIN?

All NL-based companies interested in AM can join the AMC NL. Each member company is guaranteed at least one spot at the AMC NL monthly meetings and events to share ideas and best practices, discuss challenges, and explore solutions and advocacy opportunities.

BACKGROUND

In 2021, CME NL worked with Canada’s Advanced Manufacturing Supercluster (NGen) on a [research initiative](#) that aimed to identify barriers and constraints to the adoption of Advanced Manufacturing (AM) in Newfoundland and Labrador (NL), as well as strategies to help NL companies with their AM goals. The outcome of this initiative was the Advanced Manufacturing Cluster (AMC NL) that can drive and supports AM innovation across our province.

To Join the AMC-NL Contact: David Haire - Divisional Vice President CME NL

WHAT IS AM?

Advanced manufacturing (AM) is the use of innovative technology to improve products or processes.

THE AMC NL WILL:

- Work together to make our companies more productive and competitive
- Help one another harness the potential of AM
- Learn more about and share our knowledge and experiences
- Identify mentors and networking opportunities
- Learn about available supports, programs, and funding opportunities
- Develop strategies to overcome barriers and constraints to AM that are specific to NL
- Host presentations, workshops, training opportunities, and special events related to AM
- Strengthen our sector and help build a more robust and diversified NL economy
